If you buy a new 19 hp vertical engine and run in very dusty condition, it will fail about 400 hours . The reason is the crankcase breather plate in made of steel and the block is aluminum, the plate will not expand as fast as the block, causing the four 6 m m bolt to loosen. When this happens it will leak small amounts of oil to be discharged into the cooling fins, which collects dirt and causes major failure of the engine (head gasket, valve overheating, more oil leaks from seals).
