Acid-base balance

Get Free Acid Base Fluids And Electrolytes Made

Normal pH range of ECF is from 7.35 to 7.45. Most H^+ comes from metabolism -- glycolysis, oxidation of fatty acids and amino acids, and hydrolysis of proteins. Homeostasis of pH in body fluids is regulated by acid-base buffer systems (primary control), respiratory centers in brain stem, and by kidney tubule secretion of H^+ .

Although fluid and electrolyte balance and acid/base balance are separate entities, they directly relate to one another. For example, dehydration results in a decrease in the pH or metabolic acidosis, whereas overhydration results in an increase in the pH or metabolic alkalosis.
