The 2010s haven't been a good time for AMD, that's for sure. Besides struggling with their FX series of CPUs that were years behind what Intel was selling, AMD also had trouble competing with Nvidia in the GPU market. "Team Green" dominated the high-end and AMD could only keep up in the low-end and mid-range.

Turning on Resizable BAR or Smart Access Memory greatly expands the size of that data dump, letting the CPU directly access the GPU's entire frame buffer memory. Instead of transferring data when requested by the GPU, the CPU processes and stores the data directly in the graphics memory. Graphics assets can be transferred to graphics memory in full, instead of in pieces.
