Queue implementation in Mikrotik RouterOS is based on Hierarchical Token Bucket (HTB). HTB allows to create hierarchical queue structure and determine relations between queues. In RouterOS, these hierarchical structures can be attached at two different places, packet flow diagram illustrate both Input and Postrouting chains.

Manual:Queue - MikroTik Wiki

There are multiple ways to achieve ISP redundancy with MikroTik. Some ways are more complex and offer additional functionality. This article serves as an introduction on simple ways to achieve failover using RouterOS and assumes all basic configuration has already been completed on the router.

Basic ISP Failover with MikroTik | Blog | Scoop

The best way to connect wires as described on the box: Connect ethernet wire from your internet service provider (ISP) to port ether1, rest of the ports on the router are for local area network (LAN). At this moment, your router is protected by default firewall configuration so you should not worry about that:

Manual:Initial Configuration - MikroTik Wiki

If you tick the Keep old configuration checkbox, any configuration you have done (eg: IP addresses, passwords, firewall rules, etc) will be retained. Untick the box, and you get an out-of-the-box configuration (router on 192.168.88.1 with no password).
