I'm working through Andrew W. Appel's "Modern Compiler Implementation in ML". The first 12 chapters develop a complete modern compiler and runtime for Tiger (an Algol-like language with some ML inspirations). Implementation is in ML (which seems to be Appel's preferred language) - although there are "translations" for both C and Java.

Having experimented with compiler construction for some time (though never seriously), and being a long-time ML user, Modern Compiler Implementation in ML was the perfect companion to my compiler-construction project. I largely ignored the "Tiger" language described in the book - I had my own ideas about what I wanted to create.
