procedures, and special considerations for wild animals. The dose volume guideline (p. 12) provided the maximum volumes for common routes of administration in common laboratory species. Though the table indicates it is the maximum volume, the intent is that the dose volume is the maximum volume for ideal or good practice dose volumes.

Recommended Dose Volumes for Common Laboratory Animals

We analyzed historical control data of clinical pathology testings provided by sixty-seven member companies of the Japan Pharmaceutical Manufacturers Association covering study populations of approximately 7, 000 rats/sex, 5, 000 dogs/sex, and 700 monkeys/sex.

Clinical Pathology Reference Ranges of Laboratory Animals

Source: Adapted from Formulary for Laboratory Animals, Hawk, Leary, and Morris 2005. Note: If the amount of blood volume removed is 7.5% of total blood volume, allow 1 week recovery; if amount removed is 10%, allow 2 weeks recovery; if amount removed is 15%, allow 4 weeks recovery. Common Sites for Blood Collection:
