Single-subject research methods examine the effects of two or more environmental conditions on the same individual. We compare the level of a person's behavior under one condition with the level of that same behavior under another condition. Thus, they are called "within-subject designs" because the same participant is observed in each condition.

Single-Subject Research :: Question Matters

ment of single-subject research strategies is the fact that those designs which are most readily applied by the individual practitioner typically: possess rather low levels of internal validity (Thomas, 1978). Those designs with the potential for high internal validity often present too many
