Programmable ECUs. All calibration and tuning parameters in a factory ECU are fixed by the manufacturer to suit the engine in its standard form and it is often impossible to adjust this for engine modifications. However, if the factory ECU is replaced by a programmable aftermarket system, adjustments can be made. An engine tuner can connect the ECU to a PC to tune the engine for optimum performance at each load and speed condition.

I just finished reading a book "How to Tune and Modify Engine Management Systems" and it states that the very first thing to get setup properly is the VE table. It even goes on to explain that systems with Auto-Tune feature for VE-table should set the target AFR to 12.8 across the board, this way you will always be rich enough even for hi-load ...
