General Overview Comment: "Water does just slip through the membrane along with other small, polar molecules such as ethanol and urea. Larger or charged water-soluble substances will require a protein carrier. The fatty acyl residues don't repel water, but they don't attract it either. It is true that being polar, the water is more attracted to other water molecules on the same side of the ...

Definition. A fontanelle, fontanel, or soft spot is an anatomical feature of a baby's skull. A baby has six fontanelles that consist of membranous tissue in the areas where certain adult skull sutures are found. Fontanelles allow the skull to pass through the birth canal and also provide a means of expansion as the brain grows.. The Baby Fontanelle

Fontanelle - The Definitive Guide | Biology Dictionary

The field of biology is very broad in scope and can be divided into several disciplines. In the most general sense, these disciplines are categorized based on the type of organism studied. For example, zoology deals with animal studies, botany deals with plant studies, and microbiology is the study of microorganisms.
